Who We Are .

- Conveyor Handling Company has been a leader in providing quality, cost-effective material handling solutions since 2015. Located in Faridabad, Haryana, the company has successfully partnered with customers offering them custom solutions for their unique material handling challenges. Conveyor Handling Company has developed and maintained relationships with private and public companies nationwide, as well as India and State government agencies. Furthermore, we have been recognized repeatedly by major manufacturers and integrators as a top performing solutions provider.
- When you choose Conveyor Handling Company as your Material Handling Systems Integrator, you partner with our highly skilled in-house team of professionals through every phase of your project. From design to after commissioning service, our in-house team of sales, engineers, project managers, installation crews and service technicians determine the solution that best fits your needs. Customer satisfaction will always remain our top priority. From purchasing equipment to a full turnkey solution, Conveyor Handling Company will provide a worry-free process; increasing productivity and profit by improving material handling efficiency.
- Every project is managed by our in-house team with:
 - innovation and creativity
 - extensive industry knowledge
 - value and integrity

Products

Belt Conveyor.

Move simple products from one location to another .

Move products up or down **inclines** (check with our engineers on maximum angles for your product) .

Move in either continuous or indexing modes (i.e. the belt stops and starts each time to move a product to the end of the belt using a sensor) .

Depending upon the product weight and the product being conveyed, we have many different types of powered belt style conveyors available for handling the loads. Product weights typically ranges from 1 Kg to 100 Kg.

[Loading Unloading Conveyor](#)

- [Telescopic conveyor system](#)

with its all-steel construction, is the smart solution for high volume shipping and receiving applications. With the VCIGROUPS system, you can automate your loading and unloading areas and convey a variety of products from large to small cartons, from loose bags to tires. Moving large volumes of freight in and out of trailers is made faster, easier and most importantly safer, with the operator controls conveniently located at the end of the unit.

- [Truck Loading Conveyor](#)

Our Container Loading Conveyors are low cost and portable solutions for loading & unloading vehicles. This is an efficient, fast and an economical solution for loading and unloading of packages into and from trucks / Containers. Custom built belts ensure proper gripping of packages while loading or unloading them.

Roller Conveyor

For those who are willing to get the most out of their manufacturing, packaging or assembling, the next-generation material-handling system is a must. With this in mind, “**VCIGROUPS**” comes up with an extensive range of roller conveyors for sale. While providing controlled movement of items and unrestricted access to them, this go-to equipment allows for easier and faster processing. Its main aim is to dramatically reduce manual handling by making things as automated as possible. This is what you will get with the mechanical systems from “**VCIGROUPS**” the big-name roller conveyor manufacturer in India.

GRAVITY ROLLER CONVEYORS

They are non-powered handling systems that use gravity as a means of moving objects. Due to this feature, they prove to be extremely advantageous when dealing with small items with flat bottom parts.

FLEXIBLE ROLLER CONVEYORS

Mechanical units of this type are perfect for such applications as cargo loading, shipping, and packaging. They are portable systems allowing you to roll and curve their sections for better throughput under particular conditions.

Chain Conveyor

“**VCI GROUPS**” chain conveyors are the go-to conveyors for all of your pallet handling needs. “**VCI GROUPS**” offers one of the most extensive lines of chain conveyors in the industry; from various types of accumulating roller chain to standard roller chain in single or duplex strands. Chain conveyors can be used in a single strand fashion or have dual strands for pallet handling or three or more strands for very wide parts.

Slat Conveyor

Slat Conveyors are used in horizontal conditions and operating at relatively slow speeds. They are generally used to move items that are not typically conveyable on rollers or belts, due to an irregular shape or bottom condition. They can also be used in assembly operations by modifying the slats to accommodate assembly fixtures.

Other Solutions : -

Equipment Maintenance /AMC/Service / Spares :-

Vashnavi Conveyor Industry offer you a wide range of Equipment Annual maintenance contracts which are customized according to the requirements of your equipment like VRC, Scissor Lifts, Goods Lifts and a variety of modules to choose from. The Equipment's AMC covers each and every crucial component of your equipment in a cost effective approach.

If You Have any questions about our products or service ,please consult us , we will answer you in the shortest time.
